**Philip Riley, Laura Taalman, Brainfreeze Puzzles : Color Sudoku** before purchasing it in order to gage whether or not it would be worth my time, and all praised Color Sudoku:

0 of 0 people found the following review helpful. **IF YOU LOVE SUDOKU, YOU WILL LOVE THIS BOOK!**By PleasantA whole new spin on Sudoku. This book is packed with challenging and fun puzzles, it is divided into 5 colorful themed chapters. Each chapter challenges the solver in a different way. (i.e. There's a chapter where not only do you have to solve Sudoku in the traditional way, you have to be sure that no numbers are repeated in the color shaded pyramid too. Another challenges the solver to complete the puzzle without repeating numbers in a diagonally shaded area, and much more).1 of 1 people found the following review helpful. I enjoy this bookBy CasI enjoy this book, but find that the colors are so saturated on some of the puzzles that I can't see my pencil marks. Beautiful color (which I love), but less saturated colors would be more practical.0 of 0 people found the following review helpful. Color wrongBy PuzzledI enjoy most of the puzzles in this book except for the ones with dark colors such as purple. It is very hard to see what number you have put in that box. I wish they were all more pastels because it isn't fun if you can't see what numbers you have used. Maybe if you have perfect 20/20 vision it wouldn't be bad. Since I don't---it is. It seems like the maker of the book would have had different people do the puzzles and comment on the colors.

Sudoku fans will welcome this bright new twist to the popular puzzles! Every one of these ingenious creations from Bold X to Rainbow Up makes colors and patterns part of the solving fun. And although each puzzle maintains the normal 9x9 grid and follows the basic rules of the game, every style adds an additional restriction to intensify the challenge. In Worms, for example, swirly, squirmy shapes fill the grids; the numbers increase as you work your way from head to tail. Even/Odd features squares in two colors, depending on whether the number to fill it is even or odd. And in Positional Board, no two of the red squares can be the same number. They're all lots of fun!
