This is a book for players or groups of players, who want to play more than six numbers and more tickets in a well-organized, balanced, and entertaining way. The strategies outlined in the book can be used in any pick-6 lottery in the world. The author has used advanced methods of combinatorics and optimization to design the most economical lottery system (wheel) for any given guarantee. Each system in his book comes with a complete table of possible wins. The lottery player will find systems with double and multiple guarantees, excellent navigational tools and presentation. It is a common belief that the lottery is a boring game and the only excitement comes from watching the draw and matching some of the winning numbers. This book shows that choosing the right way of playing your numbers, assessing the possible wins and filling the tickets can be as entertaining as a trip to Las Vegas!

In this new, improved, and expanded edition of his PICK-6 book, Professor Bluskov again delivers the best lottery systems to the attention of lotto players from around the world. A total of 128 current world record least expensive systems for a broad range of guarantees are presented. Players who are interested in lotto systems for PICK-5 lotteries might want to check Dr. Bluskov's PICK-5 book titled Combinatorial Systems (Wheels) with Guaranteed Wins for pick-5 lotteries, including Euro Millions and the Mega Lotteries (also at). This book offers the newest and best on lotto systems (wheels). It is a book of interest to every lottery player or a group of players who wish to play their numbers in an organized and balanced way. Lottery systems (wheels) guarantee wins in the same way a single ticket does while allowing playing with many numbers (7,8,9,10,11,12,13,14,... etc.) For instance, a single ticket guarantees a 4-win if four of the player's numbers are drawn. A lottery system is a well-organized set of tickets, giving the same guarantee, while allowing the players to use as many numbers as they wish. For example, system #24 from the book guarantees a 4-win whenever four of the player's 14 numbers are drawn; system #25 guarantees a 4-win whenever four of the player's 15 numbers are drawn, etc. Systems with many other guarantees are presented in this excellent strategy book. Each system has been constructed by Dr. Bluskov's new techniques of combinatorial and computer optimization, and, therefore, gives the most economical way of playing for a certain guaranteed win. All of these systems are world records in terms of performance (achieving certain guarantee in the minimum possible number of tickets). The book is the only one on the subject which is written by a mathematician and a lottery expert and we believe it is the best one in existence. The book offers a huge number of improvements in the area of classical lottery systems. Many features of the book are completely new for the genre, for example, systems with double and multiple guarantees and tables of possible wins. Other unique features include the presentation and organization of the material: Each system appears as a separate article, including a table of all possible wins; comments on various characteristics of the system, such as minimality, balance and density; and the system itself. The book provides the tools to make playing the lottery as entertaining as playing a table game and gives the player strategies to attack the jackpot in a balanced and well-organized way. No mathematical knowledge is needed to either play or understand the lottery systems, which makes the book accessible to virtually every lottery player or a group of players. --From the publisher

About the Author
The author has worked as a freelance writer for a number of lottery publications in Europe and North America, and has spent many years in research in Combinatorics, a branch of Mathematics, which, among other things, deals with combinatorial lottery systems (or coverings, as they call them in Combinatorics). He holds several academic degrees, including Ph.D. in Mathematics, and works as a university professor. Dr. Bluskov has written over 20 research papers related to lotteries and over 200 publications on lottery systems. The objects presented in his book originate from the most recent research in the area, and are based on his expert knowledge of the subject.
